personalized DYNAMIC *foil*

found **only** at

You can add *foil* to your favorite
Postcards, Folded, and Artistry Cards!

↳ Design your cards using the standard 4.25×6, 5×5 or 5×7 Postcard, 4.25×5.5, 5×5, or 5×7 Folding Card, 5×5 or 5×7 Flat Artistry Card, or 4×5, 5×5, or 7×5 Folding Artistry Card PSD Guides from our website. **Remember, foil can only be on one side of the card, but you can have a 2-sided press-printed design.**

↳ In your design, you'll need to decide which layers are going to be in the Personalized Dynamic Foil. These layers can be text or graphics in your design. They must be **SOLID BLACK. NO GRADIENTS** will be produced in foil.

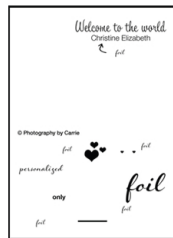

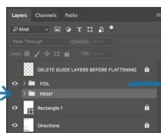

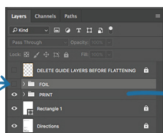

When designing in Photoshop, you can use color to show your foil layers, but when you save out the JPGs, it must be in black.

↳ When you are ready to save your JPGs, turn off all of the layers you want to be in foil, and save your JPG for the press-printed part of the design.

↳ Next turn on the foil layers, and turn off all of the press-printed layers of the design. Save your JPG for the foil.

↳ Now you're ready to take your JPG files and order through the MyACI Ordering Software! Find Personalized Dynamic Foil under Press-Printed Products > Greeting Cards > Foil.

Visit acilab.com/foil-press-cards for more information and pricing.
